# What is Lead Scoring?

Lead scoring is a methodology that assigns a numerical value to each contact in your CRM based on how closely they match your ideal customer profile and how engaged they are with your business. The higher the score, the more likely they are to buy.

## THE LEAD SCORING FORMULA

$$\text{Lead Score} = \text{Positive Actions \& Fit (+points)} - \text{Negative Signals \& Misfit (-points)}$$

### Why Lead Scoring Matters

Without lead scoring, your sales team treats every lead the same — wasting time on cold contacts while hot prospects go cold. Lead scoring ensures reps focus only on the leads most likely to convert, while marketing nurtures everyone else automatically.

#### Prioritize Sales Effort

Focus reps on the highest-potential leads every single day.

#### Align Sales & Marketing

Define "sales-ready" together with a shared numeric threshold.

#### Improve Conversion Rates

Timed, relevant outreach to leads at the right moment.

#### Automate Nurturing

Trigger workflows and  
sequences automatically  
based on score.

# Types of **Lead Scoring** in HubSpot

HubSpot offers two scoring models. Choose based on your data maturity and plan level.

## Manual Lead Scoring

- You define the criteria and assign point values
- Full control over what matters to your business
- Works on all HubSpot plans (Starter+)
- Requires regular manual review and tuning
- Best when starting out or in niche industries
- Uses the **HubSpot Score** property

## Predictive Lead Scoring (AI)

- AI analyzes patterns across all your contacts
- Learns from closed/won deals to identify what "good" looks like
- Requires **Professional or Enterprise** plan
- Needs minimum 200 contacts + deal history to train
- Scores update automatically as new data comes in
- Uses the **Likelihood to Close** property

### Recommendation

Start with **Manual Lead Scoring** to establish your baseline criteria and understand what converts in your business. Once you have 6+ months of deal history, layer in **Predictive Scoring** on top for AI-powered refinement.

| Feature        | Manual Scoring              | Predictive Scoring             |
|----------------|-----------------------------|--------------------------------|
| HubSpot Plan   | All Plans                   | Pro / Enterprise               |
| Setup Effort   | Moderate — you define rules | Low — AI trains automatically  |
| Accuracy       | Good if tuned regularly     | High — improves over time      |
| Transparency   | Fully visible logic         | Black-box AI model             |
| Best For       | All businesses              | Businesses with rich deal data |
| Score Property | HubSpot Score               | Likelihood to Close (%)        |

# Scoring Criteria & Points Framework

Lead scoring combines two dimensions: **Fit** (who they are) and **Engagement** (what they do). Below is a ready-to-use scoring framework you can adapt for your business.

## Demographic Fit

WHO they are — Positive Scores

|                                                   |     |
|---------------------------------------------------|-----|
| Job Title: Decision Maker (VP, Director, C-Suite) | +20 |
| Job Title: Manager / Team Lead                    | +10 |
| Job Title: Individual Contributor                 | +5  |
| Industry matches ICP                              | +15 |
| Company size: 50–500 employees                    | +10 |
| Company size: 500+ employees                      | +15 |
| Located in target geography                       | +10 |
| Phone number provided                             | +5  |
| Work email (not Gmail/Yahoo)                      | +10 |

## Behavioral Engagement

WHAT they do — Positive Scores

|                               |     |
|-------------------------------|-----|
| Requested a Demo / Free Trial | +30 |
| Visited Pricing Page          | +20 |
| Downloaded a Case Study       | +15 |
| Attended a Webinar            | +15 |
| Opened 3+ Marketing Emails    | +10 |
| Clicked Email CTA             | +8  |
| Visited Website 3+ Times      | +10 |
| Downloaded an eBook / Guide   | +10 |
| Submitted a Contact Form      | +20 |

## Negative Signals

Disqualifiers — Negative Scores

|                                     |     |
|-------------------------------------|-----|
| Job Title: Student / Intern         | -15 |
| Personal email (Gmail, Yahoo, etc.) | -10 |
| Unsubscribed from Emails            | -20 |
| Marked Email as Spam                | -30 |
| Industry: Competitor                | -25 |
| No activity in 90+ days             | -15 |
| Bounced Email                       | -10 |
| Company size < 10 (if SMB not ICP)  | -10 |
| Visited Careers / Jobs page only    | -10 |

## Score Decay Rules

Time-based score reduction

|                              |     |
|------------------------------|-----|
| No email opens in 30 days    | -5  |
| No website visits in 60 days | -10 |
| No engagement in 90 days     | -20 |
| Deal Closed Lost             | -30 |
| No activity in 180 days      | -40 |

### Implement Score Decay

Use a recurring HubSpot workflow to subtract points for inactive contacts. Prevents stale leads from clogging your hot pipeline.

### Scoring Range Recommendation

Keep your scoring scale between **0 and 100** for simplicity. Design criteria so a perfect ICP who books a demo reaches approximately 80–100 points. This makes threshold definitions intuitive for both marketing and sales teams.

# Step-by-Step **Setup** in HubSpot

---

Follow these steps to configure the HubSpot Score property and build your first scoring rules inside HubSpot.

1

## Navigate to the Lead Scoring Settings

Find the scoring configuration inside your HubSpot portal settings.

- ▶ Click the **Settings**  icon in the top-right of your HubSpot portal.
- ▶ In the left sidebar, go to **Properties** .
- ▶ Search for **"HubSpot Score"** in the property list.
- ▶ Click on **HubSpot Score** to open the scoring editor.

## 2

## Add Positive Scoring Attributes

Define the criteria that add points to a contact's score when the condition is met.

- ▶ Click **"Add criteria"** under the **Positive attributes** section.
- ▶ Select a **property** (e.g., Job Title, Industry, Form Submission, Page View).
- ▶ Set the **condition** (e.g., Job Title "contains" Director).
- ▶ Enter the **point value** for that criterion (e.g., 20 points).
- ▶ Click **Save** and repeat for each positive criterion.

### Available Scoring Criteria Types in HubSpot

- **Contact properties** — Job title, industry, country, lifecycle stage, etc.
- **Company properties** — Company size, revenue, domain, industry
- **Form submissions** — Submitted a specific form (e.g., demo request)
- **Email engagement** — Opened, clicked, unsubscribed
- **Page views** — Visited a specific URL (e.g., /pricing)
- **List membership** — Is/was a member of a specific contact list
- **Workflow enrollment** — Was enrolled in a specific automation

## 3

## Add Negative Scoring Attributes

Define criteria that subtract points — these act as disqualifiers.

- ▶ Click **"Add criteria"** under the **Negative attributes** section.
- ▶ Add criteria like: Email unsubscribed = true → **-20 points** .
- ▶ Add: Job Title contains "student" → **-15 points** .
- ▶ Add: Email bounce reason is known → **-10 points** .
- ▶ Save each criterion after setting the negative point value.

## 4

## Save and Activate the Scoring Model

Once all criteria are configured, activate the model to start scoring.

- ▶ Review all positive and negative criteria in the editor.
- ▶ Click **Save** at the top of the scoring editor.
- ▶ HubSpot will immediately begin calculating the **HubSpot Score** for all existing contacts.
- ▶ Allow 1–4 hours for HubSpot to score all existing records (varies by database size).

## 5

## Verify Scores on Contact Records

Spot-check the scores on known contacts to validate your model is working correctly.

- ▶ Open a contact you know is a strong lead — verify their score is in the high range.
- ▶ Open a contact you know is a poor fit — verify their score is low or negative.
- ▶ On the contact record, find the **HubSpot Score** property in the left panel.
- ▶ Click the score number to see a breakdown of which criteria are contributing.

## 6

## Enable Predictive Lead Scoring (Pro/Enterprise Only)

Activate AI-powered scoring alongside manual scoring for maximum accuracy.

- ▶ Go to **Settings** → **Properties** → **Contact Properties** .
- ▶ Search for **"Likelihood to close"** .
- ▶ This property is automatically populated by HubSpot AI — no configuration needed.
- ▶ HubSpot requires at least **200 contacts** in your CRM with deal associations to begin training.
- ▶ Use this as a secondary score alongside your manual HubSpot Score.

## Lead Tiers & Score Thresholds

Define clear score bands that map to lead stages and sales actions. This removes all ambiguity about which leads sales should call today.

**0–24**

 **Cold Lead**

Early stage. Little fit or engagement. Needs nurturing content, not sales calls.

**Nurture via Email**

**25–49**

 **Warm Lead**

Some engagement. Decent fit. Enroll in targeted email sequences and monitor for activity spikes.

**Enroll in Sequence**

**50–74**

 **Hot Lead (MQL)**

Strong fit and engagement. Marketing Qualified Lead — alert sales for soft outreach within 24 hours.

**Sales Soft Outreach**

**75–100**

 **Sales-Ready (SQL)**

Perfect fit, high engagement. Sales Qualified Lead — assign to a rep immediately for direct outreach.

**Immediate Sales Call**

| Score Band | Stage     | Lifecycle Stage          | Sales Action                       | Response SLA        |
|------------|-----------|--------------------------|------------------------------------|---------------------|
| 0-24       | Cold      | Subscriber / Lead        | Add to nurture email campaign      | No immediate action |
| 25-49      | Warm      | Lead                     | Enroll in targeted drip sequence   | Monitor weekly      |
| 50-74      | Hot — MQL | Marketing Qualified Lead | Notify assigned rep; soft outreach | Within 24 hours     |
| 75-100     | SQL       | Sales Qualified Lead     | Immediate rep assignment + call    | Within 4 hours      |

### Define Thresholds with Your Sales Team

The thresholds above are starting points. The most important thing is that **Marketing and Sales agree** on what score constitutes an MQL (Marketing Qualified Lead) and an SQL (Sales Qualified Lead). Hold a joint meeting to finalize these numbers before going live.

# Automation **Workflows** by Score

The real power of lead scoring is what happens automatically when a contact reaches a threshold. Build these four core workflows in HubSpot to activate your scoring model.

## Workflow 1 — MQL Alert & Assignment (Score $\geq 50$ )

1

**TRIGGER****Contact's HubSpot Score reaches 50+**

Enrollment trigger: **HubSpot Score  $\geq 50$**  (check every day, re-enroll if score increases again).

2

**ACTION****Update Lifecycle Stage to MQL**

Set Contact property: **Lifecycle Stage = Marketing Qualified Lead.**

3

**NOTIFY****Send Internal Notification to Sales Rep**

Send in-app + email notification to the contact's assigned owner: *"New MQL: [Contact Name] has reached a lead score of [Score]. Review now."*

4

**ACTION****Create a Follow-up Task for the Rep**

Create a task: **"Reach out to MQL within 24 hours"** assigned to the contact owner. Due date: tomorrow at 9 AM.

## Workflow 2 — SQL Immediate Alert (Score $\geq 75$ )

1

## TRIGGER

**HubSpot Score reaches 75+**

High-priority trigger — fires as soon as score crosses 75.

2

## ACTION

**Update Lifecycle Stage to SQL**

Set **Lifecycle Stage** = **Sales Qualified Lead**. If no owner assigned, auto-rotate to next available rep using round-robin rotation.

3

## NOTIFY

**Urgent Slack / Email Notification**

Send urgent notification to rep AND their manager: "🔥 **HOT LEAD: [Name] scored [Score]. Call within 4 hours.**"

4

## ACTION

**Enroll in Sales Sequence**

Automatically enroll the contact in a **Sales Email Sequence** (if not already in an active sequence).

## Workflow 3 — Score Decay (Inactive Leads)

1

## TRIGGER

**Last Activity Date is more than 90 days ago**

Scheduled workflow — runs daily. Trigger: **Last Activity Date > 90 days ago AND HubSpot Score > 0.**

2

**ACTION**

### Calculate and Reduce Score

Use a **Math calculation** action to subtract 20 from the current HubSpot Score (minimum 0).

3

**BRANCH**

### If Score Drops Below 25 — Downgrade Lifecycle

If HubSpot Score is now < 25: Set Lifecycle Stage back to **Lead** and remove from any active sales sequences.

### Workflow 4 — Nurture Cold Leads (Score 0-25)

Build a long-term nurture workflow that enrolls all contacts with score < 25 and sends educational content every 2 weeks. When their score crosses 25 (due to engagement), they are automatically unenrolled from nurture and enrolled in MQL workflows. This creates a fully automated lead progression engine.

## Best Practices & Common Mistakes

### Do This

Start simple — 5–10 criteria, then expand

Score both demographic FIT and behavioral  
ENGAGEMENT

Agree on MQL/SQL thresholds with sales before  
launch

Implement score decay for inactive leads

Review and tune scores every 30–60 days

Use negative scoring to disqualify bad fits

Tie scoring thresholds directly to lifecycle stages

Build workflows that fire on score milestones

Track win rates by score band to validate accuracy

Document every criterion and the reason for its  
point value

### Avoid This

Too many criteria (50+) that make scores  
unpredictable

Only scoring engagement, ignoring demographic  
fit

Setting thresholds without sales team agreement

Never revisiting or tuning the model after launch

Ignoring score decay — stale leads inflate the  
pipeline

Using identical point values for all criteria

Not tracking which leads actually convert to  
customers

Sending all scored leads directly to sales (skipping  
MQL)

Building complex logic before validating simple  
rules first

No documentation — creates a black box nobody  
understands

### The 30-Day Review Cycle

After your first 30 days, pull a report of all contacts who scored 75+ and check how many converted to customers. If conversion rate is below 20%, your thresholds are too low. If sales say they're getting too many bad leads, raise the MQL threshold. Iterate monthly until your scoring model reliably predicts closers.

### Avoid "Score Inflation"

If a contact can trigger the same positive criterion repeatedly (e.g., visit the pricing page 10 times for  $10 \times 20 = 200$  points), your scores become meaningless. HubSpot's scoring tool applies each rule **once per contact**, but double-check your workflow-based scoring rules to avoid double-counting.

# Pre-Launch Checklist

Use this checklist to ensure your lead scoring model is fully configured and ready to drive revenue.

## Model Setup

HubSpot Score property is configured in Settings → Properties

At least 5 positive demographic fit criteria are defined

At least 5 positive behavioral engagement criteria are defined

Negative disqualifier criteria are configured

Point values are weighted appropriately (high-intent = more points)

Model validated on 5–10 known good leads and 5–10 bad leads

## Alignment & Process

MQL threshold agreed upon with sales leadership

SQL threshold agreed upon with sales leadership

Response SLA defined for MQLs (e.g., 24 hours)

Response SLA defined for SQLs (e.g., 4 hours)

Sales team trained on what lead score means

Criteria and logic documented in an internal wiki/SOP

## Workflows Built

MQL alert + lifecycle update workflow (Score  $\geq$  50)

SQL urgent alert + rep assignment workflow (Score  $\geq$  75)

## Reporting & Review

HubSpot report created: Contacts by Score Band

Report created: MQL-to-SQL conversion rate by month

Score decay workflow for inactive contacts

Report created: Closed/Won deals by Lead Score Band

Cold lead nurture email sequence (Score < 25)

30-day model review calendar event scheduled

### You're Ready to Launch!

Once all items above are checked, your lead scoring system is live. Expect the first meaningful results within **30–60 days** as enough contacts accumulate scores and your sales team establishes the MQL follow-up rhythm. Review and iterate every month — a well-tuned scoring model is one of the highest-ROI activities in your HubSpot portal.

## HubSpot Lead Scoring Guide

This document provides a professional, client-ready framework for implementing and optimizing lead scoring inside HubSpot CRM to prioritize sales effort and increase revenue.
